5: What are the hazards when using a laser cutter?

Exposure to laser beam can cause severe eye damage or skin burns. Sharp edges could result in lacerations, and puncture wounds.

6: Which laser would you use if you wanted to cut almost any type of metal?

One of the benefits of a fiber laser is their ability to cut reflective materials. This is thanks to the way the laser is transmitted to the work piece, and makes them a better choice for brass, copper and polished stainless steels and aluminum
